DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Election/Restriction

2. Applicant's election without traverse of specie 1, claims 1-16 in Paper No. 5 is acknowledged.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2-226799 in view of Kugimiya et al. [US 5,350,628].

JP 2-226799 discloses a magnetic element comprising:

- a composite magnetic body including metallic magnetic powder and thermosetting resin

[see abstract] having a packing ratio of the metallic magnetic powder of 65 vol% to 90 vol%; and

Art Unit: 2832

- a coil [1] embedded within the composite magnetic body.

JP 2-226799 discloses the instant claimed invention except for the specific resistivity of the magnetic body.

Kugimiya et al. discloses a magnetic sintered composite material formed of an alloy of Fe-Al-Si having a resistivity of 20MOhms or more.

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to use the composite material design of Kugimiya et al. in the composite body of JP 2-226799 for the purpose of improving flux density.

Regarding claims 6-8, JP 2-226799 discloses the instant claimed invention except for the magnetic powder having a thin silicon oxide film formed on a surface thereof.

Kugimiya et al. discloses the magnetic powder having a silicon oxide film formed on the surface thereof.

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to use the magnetic particle of Kugimiya et al. in the composite body of JP 2-226799 for the purpose of reducing interference.

The specific thickness of the silicon oxide film, mean particle size, insulating material shape, aspect ratio of the electrical insulating material and the use of organic material with the composite magnetic body would have been an obvious design consideration based on the particular applications and environment of use of the composite magnetic body.
